

Assignment #5 – Netflix Landing Page Clone

Scenario:

You have just joined a design internship as a junior front-end developer at a digital agency. Your manager has given you your first real-world project to recreate the Netflix homepage layout using only HTML and CSS.

Your task is to build a responsive Netflix landing page clone that looks close to the original website but without any JavaScript functionality.

This assignment will help you practice layout building using Flexbox, CSS Grid, and Media Queries for responsiveness.

Website to Clone:

🔗 Reference Website: <https://www.netflix.com/pk/>

Steps to Build the Project

Step 1: Create the Project Folder

- Make a new folder: css-assignment-5
- Inside it, create two files:
 - index.html → will contain your page structure
 - style.css → will contain your CSS styling
- Link your CSS file in the HTML using:

```
<link rel='stylesheet' href='style.css'>
```

Step 2: Page Sections to Create

1. Navbar / Header:

Netflix logo (use an image or text logo 'NETFLIX'), a 'Sign In' button, background image (hero banner).

2. Hero Section:

Large banner, headline ('Unlimited movies, TV shows, and more.'), subtext, and 'Get Started' button.

3. Features Section :

2–3 feature blocks (e.g., 'Enjoy on your TV', 'Download your shows to watch offline'). Use Flexbox or Grid.

4. FAQ Section (Optional):

Static boxes for questions like 'What is Netflix?' (No JavaScript).

5. Footer Section:

Include footer links like FAQ | Help Center | Terms of Use | Privacy.

Step 3: Styling Guidelines

- Use a dark theme (black or dark gray background, white text).
- Netflix logo should be red (#E50914).
- Use Flexbox or Grid for layout alignment.
- Add hover effects on buttons (slight color change).
- Use media queries for responsiveness (stack content on small screens).

Instructions for Students

1. Create the folder and files as explained above.
2. Use only HTML and CSS — no JavaScript.
3. Match the Netflix homepage layout closely.
4. Ensure responsive design for both desktop and mobile.
5. Submit your project as a ZIP file.

What You Will Learn

- Structure a real-world landing page using HTML.
- Use Flexbox and CSS Grid for layout design.
- Make responsive designs using media queries.
- Apply modern UI design principles (spacing, contrast, typography).
- Work from a real website reference like a professional front-end developer.
